PROFESSIONAL SUMMARY

AI-native full-stack product engineer and solo founder who has shipped 8 products from zero to production, building user-facing creative and AI-agent experiences in **React/Next.js/TypeScript** with **Node.js** and **Python** services. Strong end-to-end ownership across product scoping, typed API design, and reliability-focused delivery (deployment, CI/CD, and validation). Fluent with agentic coding tools (**Cursor**, Claude, GPT) with a review-first workflow—using AI to move faster while staying rigorous about correctness and maintainability.

EDUCATION

Beijing City University

Associate Degree, *Film & TV Photography and Production*

SKILLS

Programming Languages: TypeScript, Python

Frameworks & Libraries: Next.js, React, Tailwind CSS, Agent Frameworks

Databases: MongoDB, Supabase

Tools & Software: Cursor, Claude, GPT, MCP, Tool Calling, AI Workflows, LLM API Integration, REST APIs, WeChat Mini Programs, Vercel, GitHub Actions, CI/CD, Node.js

Soft Skills: End-to-end ownership, AI-native development, Rapid validation, Full-stack delivery

Spoken Languages: Chinese, English

WORK EXPERIENCE

Independent Product Developer / Solo Founder | Independent Product Developer / Solo Founder Jan 2024 - Present

- Shipped 8 products from zero to production, including AI assessment and agent/tooling products with user-facing interfaces built in **React/Next.js/TypeScript**.
- Owned the full loop: user research → product definition → full-stack development (web + **Node.js/Python** services) → DevOps/CI/CD → data validation → business judgment.
- Built and consumed typed **API contracts** between browser clients and backend services, integrating LLM APIs and tool-calling workflows into production request paths.
- Implemented **asynchronous UI** patterns for long-running AI tasks (loading/progress states, retries, and failure recovery) to keep workflows usable under partial failures.
- Core methodology: validate hypotheses within 2–4 weeks at minimal cost; sunset quickly when metrics don't support continuation.

PROJECTS

AI Native Standard (ANS) — AI Work Simulation & Assessment Platform

- Built an AI work-simulation and assessment platform in **Next.js/React/TypeScript** that evaluates how candidates define problems, collaborate with AI, exercise judgment, execute, and iterate.
- Delivered the full request path: scenario design → candidate task completion → LLM evaluation → AI Work Profile → shareable report, integrating OpenAI-compatible APIs (302.AI).
- Architected an extensible task framework supporting multiple roles (Product Growth, Customer Support, Research Agent) with versionable prompts and typed data structures across the client/server boundary.
- Designed **asynchronous UI** flows for long-running evaluations (progress states and error handling) to keep the experience responsive while results are computed.

Wish Weaver — WeChat Mini Program for Relationship Care

- Designed a low-pressure, high-transparency approach to caring for important people; built the WeChat Mini Program end-to-end including WeChat Pay integration.
- 260+ users | 17.24% retention rate | ¥150+ revenue
- Validated willingness to pay and user stickiness via shipped product iterations and instrumentation-driven decisions.

WisePick API — Agent Tool Routing Service

- Built an agent tool-decision routing service that reduces trial-and-error by selecting optimal capability paths for AI agents.
- 17 GitHub stars | 177 ECU recommendation calls served
- Owned product design, full-stack development, deployment, and community maintenance; integrated tool-calling workflows and iterated based on developer feedback.

Time bracelet — AI Smart Wearable Voice Interface

- Designed an AI-powered wrist-worn device enabling one-sentence automation of mobile app actions (e.g., voice-activated food ordering).
- 640 backers interested | ¥1,398 crowdfunded
- Independently designed hardware prototype, voice interaction logic, automation flows, and crowdfunding campaign.
- Validated user interest in AI + hardware scenarios; halted at prototype due to funding shortfall.
